

Pre-installation Instructions

 supportcenter.nc4.com/hc/en-us/articles/217957077-Pre-installation-Instructions

Before installing the E Team application, please make sure the following steps are taken:

1. Please identify the server(s) on which the installation is to be. Also, please ensure that the administrator username and password is available. Installation will be performed by logging into the server as an administrator.
2. Make sure that SQL Server 2008, SQL Server 2012, or Oracle 11G or Oracle 12C is installed and an SQL Server/Oracle Administrator is available to assist as necessary.
3. Create two new databases on the SQL Server or two schema on the Oracle Server named, **ETeAMOP** and **ETeAMTR**. The database owner of both databases will be user 'etteam' with password 'etteam'.

For SQL Server, 'etteam' must be the owner of both databases, i.e. 'etteam' should have 'db_owner' and system administration role.
