# Critical Event Management (CEM) Risk Event Feeds

Everbridge provides out-of-the-box, premium, and self-service Risk Event Feeds with different product packages and configurations for CEM Customers.

There are different types of Risk Event Feeds. Types include events like Weather, Wildfire, Hurricane, or General, like RIMC Powered by NC4. Feed type determines which categories and subcategories are used.

## Everbridge RIMC Feeds

Everbridge Risk Intelligence Monitor Center (RIMC) leverages many diverse information sources to provide early warning of Risk Events at all levels, from neighborhood to international.

### RIMC Powered by NC4, RIMC Advisories

The Risk Intelligence Monitoring Center combines thousands of trustworthy data sources with an experienced team of analysts to provide verified, real-time data about potentially threatening events around the world.

RIMC Powered by NC4, RIMC Advisories	
Source	Everbridge
Type	General
Additional Notes	
<ul style="list-style-type: none"> <li> <b>RIMC Advisories</b> from the RIMC are derived from thousands of trustworthy data sources and curated by an experienced team of analysts. They provide global intelligence about future and ongoing safety, security, and health risks. RIMC Advisories allow Everbridge Risk Intelligence Monitoring Center Analysts to provide <i>forward-looking</i> global intelligence.                     </li> </ul>	

## Everbridge Global Highlights and Situation Reports

**Everbridge Global Highlights** from the Risk Intelligence Monitoring Center provide summaries and analyses of events or conditions in a country. Each highlight includes the assessment of RIMC’s professional analysts about the potential impact on travel and security.

**RIMC Situation Reports** from the Risk Intelligence Monitoring Center provide timely, in-depth, contextual information about events that may impact organizational strategic planning, assets, supply chain resiliency, and traveler and corporate security. These long-form reports include the latest developments of tactical and strategic importance on complex events worldwide. Situation reports may also cover complex, long-term developments around the globe such as terrorism, drug wars, piracy, and civil unrest. Also covered are significant outbreaks of infectious diseases, particularly virulent and widespread seasonal illnesses, and health-related developments.

Everbridge Global Highlights, RIMC Situation Reports

<b>Type</b>	General
Additional Notes	
Everbridge Global Highlights and Situation Reports are only alertable for the <b>Other Security</b> category.	

## Weather

### Weather Events (US)

The U.S. National Weather Service (NWS) issues watches, warnings, and advisories for weather hazards. The NWS issues a watch when conditions are favorable for a significant weather event to develop; it issues a warning when hazardous conditions are expected and you may have to take action, such as delaying travel, staying indoors, dressing for extreme weather, or evacuating. Visual Command Center (VCC) can also alert you to advisories, which indicate a type of weather is expected that is not severe enough to merit a warning, but which may cause significant inconvenience or make travel hazardous.

Weather Events (US)	
Source	U.S National Weather Service
Type	Weather
Additional Notes	
<ul style="list-style-type: none"> <li>• Risk Events are displayed as polygons.</li> </ul>	

### Damage Threat Categories for Severe Thunderstorm Warning Segments

The National Weather Service (Weather Events US) can convey the severity and potential impacts of thunderstorm winds and hail by adding a “damage threat” tag to Severe Thunderstorm Warnings.

The three categories, in order of lowest to highest damage threat, are:

1. Base (default)
2. Considerable
3. Destructive

These tags and additional messaging are designed to promote immediate action based on the threats.

The criteria for a baseline or **Base** severe thunderstorm warning are 1.00-inch (quarter-sized) hail and/or 58 mph thunderstorm winds. This will not activate a Wireless Emergency Alert (WEA) on smartphones. When no damage threat tag is present, damage is expected to be at the base level.

The criteria for a **Considerable** damage threat are at least 1.75-inch diameter (golf ball-sized) hail and/or 70 mph thunderstorm winds. This will not activate WEA.

The criteria for a **Destructive** damage threat are at least 2.75-inch diameter (baseball-sized) hail and/or 80 mph thunderstorm winds. Warnings with this tag will automatically activate WEA on smartphones within the warned area.

Thunderstorm Damage Threat (tag category)	Wind	Hail Diameter	WEA?
Base (No tag - default)	58 mph	1.00-inch (quarter-sized)	No
Considerable	70 mph	1.75-inch (golf ball-sized)	Yes
Destructive	80 mph	2.75-inch (baseball-sized)	Yes

**NOTE:** Refer to the [National Weather Service website](#) for more information.

## Weather Events (Europe)

The Weather Company provides weather watches, warnings, statements, and advisories in Europe which are issued by MeteoAlarm.

Weather Events (Europe)	
<b>Aggregator</b>	The Weather Company
<b>Source</b>	MeteoAlarm
<b>Type</b>	Weather
Additional Notes	
<ul style="list-style-type: none"> <li>• To reduce duplicate alerting, Everbridge aggregates events received from The Weather Company into a single alertable event across event description, time, and distance thresholds.</li> <li>• Risk Events are displayed as polygons.</li> </ul>	

## Weather Events (Canada)

The Weather Company provides weather watches, warnings, statements, and advisories in Canada which are issued by Environment and Climate Change Canada.

<b>Type</b>	Weather
Additional Notes	
<ul style="list-style-type: none"> <li>• To reduce duplicate alerting, Everbridge aggregates events received from The Weather Company into a single alertable event across event description, time and distance thresholds.</li> <li>• Risk Events are displayed as polygons.</li> </ul>	

## Wildfires (NIFC)

The National Interagency Fire Center (NIFC) provides information about active wildfires in the US. NIFC receives fire location and perimeter reports from federal, state, local, and non-governmental agencies involved in wildland firefighting.

Wildfires (NIFC)	
<b>Source</b>	National Interagency Fire Center (NIFC)
<b>Type</b>	Wildfire

## Hurricanes (GDACS)

The Global Disaster Alert Coordination System (GDACS), a joint initiative of the United Nations and the European Union, provides information on tropical storms. Reports include an estimate of the impact based on the magnitude of each event and possible risk to the nearby population.

Hurricanes (GDACS)	
<b>Source</b>	Global Disaster Alert Coordination System (GDACS)
<b>Type</b>	Hurricane
Categories	
<ul style="list-style-type: none"> <li>• Hurricane</li> </ul>	
Wind Swaths	
<ul style="list-style-type: none"> <li>• 60 km/h</li> <li>• 90 km/h</li> <li>• 120 km/h</li> <li>• Projected Path of Hurricane</li> </ul>	
Additional Notes	
<ul style="list-style-type: none"> <li>• The Hurricane risk event feed is alertable across wind speeds or the hurricane's projected path.</li> <li>• For hurricane event end date and time, CEM automatically adds 1 day to the expiration date provided by GDACS.</li> </ul>	

## Tropical Cyclones and Disturbances (NHC)

The National Hurricane Center's (NHC) mission is to save lives, mitigate property loss, and improve economic efficiency by issuing the best watches, warnings, forecasts, and analyses of hazardous tropical weather while increasing understanding of these hazards.

Tropical Cyclones and Disturbances	
<b>Source</b>	National Hurricane Center and Central Pacific Hurricane Center
<b>Type</b>	Tropical Storm
Categories	
<ul style="list-style-type: none"> <li>Tropical Storm</li> </ul>	
Hurricane Severity Probabilities for Next 5 Days	
Minor	0-40%
Moderate	40-60%
Severe	60-90%
Extreme	90%+
Additional Notes	
<ul style="list-style-type: none"> <li>This feed provides early warnings when tropical cyclones may be developing. For each basin, it reports the location, if any, where cyclone activity is most likely.</li> <li>The Tropical Storm Feed will only report a single risk event for each of the three monitored basins: Central Pacific, Eastern Pacific, and Atlantic.</li> <li>As the chances of affected asset proximity are low, it is advised to set the Alert Settings or Workflows to 'Always Alert' for this Risk Event Feed.</li> </ul>	

## Earthquakes

The U.S. Geological Survey provides worldwide earthquake information. Earthquake reports include magnitude (a measure of the quake's energy). Where available, reports also include intensity, which is a measure of the quake's effects on people and structures.

Earthquakes	
<b>Source</b>	U.S. Geological Survey (USGS)
<b>Type</b>	Earthquake
Additional Notes	
<ul style="list-style-type: none"> <li>• Earthquake Alert Settings are aligned to magnitude rather than risk event severity: low, moderate, extreme, severe.</li> <li>• CEM will alert on an earthquake when any sensor is above the alerting threshold. Sensor values may differ significantly before a consensus value is produced and reported as magnitude. Therefore, you may have an alert workflow meet the alerting threshold when the magnitude is less than the threshold.</li> <li>• <a href="#">Reporting times from USGS</a> depend on the size and location of the earthquake.               <ul style="list-style-type: none"> <li>◦ An earthquake in California is processed and posted to the system in 2.5 minutes (on average). This is because our seismic network is very extensive in California, where there are many earthquakes and many people.</li> <li>◦ An earthquake in the U.S. outside of California (where seismic networks are not as dense), is typically posted within 8 minutes.</li> <li>◦ An earthquake outside the United States, where the seismic network is sparse in some areas, takes 20 minutes (on average) to process and post. Our webpages with real-time information are cached for 60 seconds, so there might be an additional delay of up to 60 seconds for the webpage to be updated.</li> </ul> </li> </ul>	

## State and Local Government

The Everbridge Nixle service enables government agencies to send emergency messages. Agencies that use Everbridge Nixle include local police departments, county emergency management offices, and municipal governments in all 50 states.

State and Local Government	
<b>Source</b>	Everbridge Nixle
<b>Type</b>	General
Additional Notes	
<ul style="list-style-type: none"> <li>• Everbridge Nixle does not currently support CEM subcategories for Alerting workflows</li> <li>• Some local agency risk events have significantly longer End Times associated with the risk event. These past events will be displayed in the timeline.</li> <li>• Risk Events are displayed as polygons.</li> </ul>	

## Mobile Safety

The Mobile Safety feed displays alerts in Visual Command Center when a Safety event, such as an SOS, is triggered from a mobile device.

Mobile Safety	
<b>Source</b>	Everbridge Mobile App
<b>Type</b>	Mobile Safety

## Operator-Entered Risk

Visual Command Center users can add custom risk events through the Operator Console. This lets you capture events important to your Organization that have not been reported by the data sources supplied with VCC.

Operator-Entered Risk	
Source	Manual entry from VCC Operator Console
Type	Operator-Entered Risk

## Custom Feeds

### Self-Service Risk Events

In addition to the many Risk Event Feeds that Everbridge offers, Self-Service Risk Events provide the ability to send your exclusive risk data or data from a third party to your Everbridge Organization using a RESTful API.

Self-Service Risk Events
