## Introduction

The **Custom Roles** feature allows administrators to fully configure existing featurelevel permissions by using a base template from existing roles, where they can add or remove individual permissions consistent with their Organization's needs.

### **Use Cases**

Some common use cases for expanding privileges include:

- As an Administrator, I want to create an Incident Operator to have the ability to create an Incident template.
- As an Administrator, I want to create an Incident Operator to have the ability to manage Contacts.
- As an Administrator, I want Incident Operators to have access to Universe to draw shapes and see how many Contacts are impacted.
- As an Administrator, I want to create a Dispatcher to have the ability to access Incident Communication features.
- As an Administrator, I want to create a Dispatcher to have the ability to manage Contacts.
- As an Administrator, I want a Dispatcher to be authorized to view Notification templates created by Organization Administrator roles.
- As an Administrator, I want a Dispatcher to be authorized to view Contact and group information while not able to change them.
- As an Administrator, I want to have a Group Manager role that can access Incident Communication features.

Sometimes Administrators will be interested in creating a Custom Role to restrict access to specific areas, such as:

- Creating an Incident Administrator role with the Edit Contacts permission disabled.
- Creating a Dispatcher role without access to Universe.

### **Roles and Permissions Scope**

Custom Roles can be created from any of the following Role Templates:

- 1. Incident Operator
- 2. Incident Administrator
- 3. Group Manager
- 4. Dispatcher
- 5. Data Manager

#### **Configurable Permissions Areas**

Certain areas within Everbridge Suite have configurable permissions with Custom Roles. While more will be added over time, these currently include:

- 1. Universe
- 2. Visual Command Center
- 3. Notifications
- 4. Publish Options
- 5. Incidents
- 6. Contacts
- 7. Critical Events
- 8. Organization Settings
- 9. Reports
- 10. Advanced Reporting
- 11. Travel Risk Management
- 12. Asset Management

For a full list of configurable Custom Role permissions, see the Custom Roles Permissions Grid on the **Roles** page in the Manager Portal. The legacy Permissions Grid is available for download from here, as well.

## 

## Not Within Custom Roles Scope

The following items aren't within the scope of Custom Roles:

- The Custom Roles feature doesn't add any new permissions.
- It will not add the ability for Group Managers to Upload Contacts. Any resource allocation of contacts will disable the Upload Contact feature for all role templates.
- It will not allow Account Administrators to manage cross-Organization Contacts, Notifications, or Incidents.
- It will not limit access to Contact Record data fields.
- A role cannot manage Incidents launched by another role regardless of IC Template access (unless the role is given access to all Communication resources).

## Custom Role Usage Overview

### **Creating a Custom Role**

Custom Roles can be viewed, created, and edited from the **Roles** page.

**NOTE:** See <u>Validation Rules</u> for more details about the validation process that occurs while creating a Custom Role.

To add a Custom Role:

1. Click New Custom Role.

<sup>ve</sup> verbridge <sup>-</sup>	EBTS - Internal Troubleshooting (Account Admin) - 🗮 🕹 🕢 💽 Everbridge 360° 💿 Log Out

⊕ Users <b>2. Roles</b>	New Role New Custom Role
Settings	Search role Q Organization Admin(1) v
	Organization Admin Select a role from the list at left

- 2. The **New Custom Role** page appears, where this new Custom Role can be given a name.
- 3. Under the **Permissions** tab, select a predefined role template to use as a starting point for the customization. The Custom Role will inherit any

permissions and resources (templates or contacts) included in the base role.

	Dispatcher
	Group Manager
	Incident Administrator
	Incident Operator

• NOTE: If a Custom Role is later edited to change the base role, a message will appear stating that the inherited permissions and resources will also be updated to reflect the new selection. Click **Confirm** on the prompt to continue.

Setti	ings	
	Confirm X	
n Test <b>e</b>	Are you sure you want to change the starting role? Once confirmed, all existing permission and resource configurations will be replaced by those defined in the selected base role.	
	Cancel Confirm	

4. Use the **Expand All** option to quickly see which permissions for each feature are configurable for the selected Role Template. The number of included permissions for each section is indicated next to its name for quick reference

without needing to expand it.

	Create, edit and delete information variables	
	<ul> <li>Restrict to simulation mode only</li> </ul>	
	- Reopen incidents	

 Permissions featuring the Core Permission icon are one of the four fundamental permissions (or permission combinations), and you must enable at least one of them. Clicking the icon opens a side panel with more details about the Core Permissions.

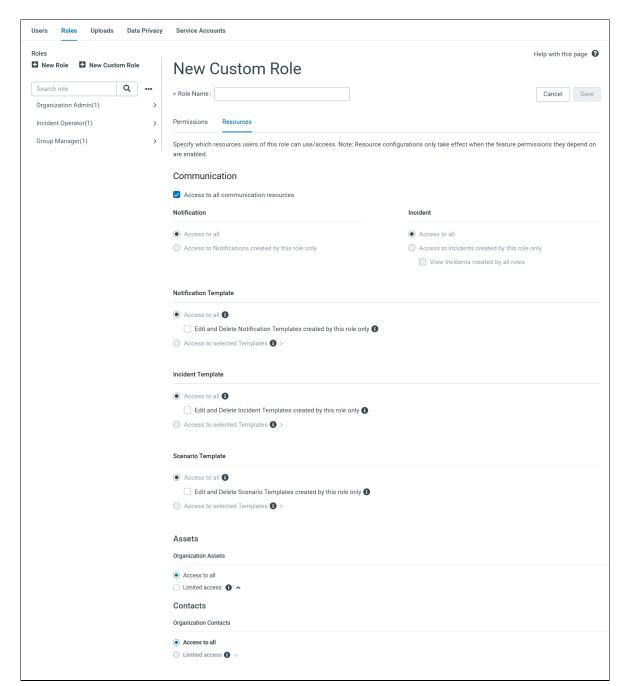

<sup>ve</sup> verbridge	<ul> <li>Incidents (5/14)</li> </ul>	X Core Permission
<ul> <li>*)</li> </ul>	Create Incident Schedules 💙	
Communications	Launch and manage incidents Gove	The following Permission(s) are fundamental feature Permissions for a role. Please ensure at least one of
Contacts + Assets	Launch and manage scenarios IV	the core permission(s) is selected:
V CONDUS * ASSES	- Incident Chat	<ul> <li>Send an existing notification template</li> </ul>
Users	Create, edit and delete scenarios	(Notifications) AND Manage active/sent notifications (including stop, rebroadcast)
2. Roles	Smart conference bridges	(Notifications)  • Launch and manage incidents (Incidents)
A 14 14	Enforce privacy options	View contact Name and External ID (Contacts)
C Settings	<ul> <li>Anonymous Contacts (Public Incident Zones)</li> </ul>	<ul> <li>Use selection tools to highlight contacts on the</li> </ul>
	Launch new incident by phone 💙	map (Universe)
	Registered Contacts (Private Incident Zones) **	
	Create, edit and delete incident templates	
	Create, edit and delete information variables	
	<ul> <li>Restrict to simulation mode only</li> </ul>	
	- Reopen incidents	

The four Core Permissions are:

- Send an existing Notification template (Notifications) AND Manage active/sent Notifications (including stop, rebroadcast) (Notifications)
- Launch and manage Incidents (Incidents)
- View Contact Name and External ID (Contacts)
- Use selection tools to highlight Contacts on the map (Universe)
- 7. Once the desired permissions have been selected, click the **Resources** tab to specify which resources can be accessed or used by this new role. Note that resources can be configured independently from features they depend on but will only take effect when the feature permissions they depend on are enabled.

Resources are categorized into three types:

- Communication
  - Notification
    - Incident
  - Notification Template
  - Incident Template
  - Scenario Template
- Assets
  - Organization Assets
- Contacts

- Organization Contacts
- 8. If the new Custom Role is only intended to have access to certain resources, such as specific Notification or Incident templates, you can define this by selecting **Access to Selected Templates** and choosing the desired templates. Note that the resources inherited from the chosen base role will already be selected.

Access to all			
ccess to selected Templates () $\checkmark$

**NOTE:** The **New Role** button on the Roles page still functions as it did before the introduction of Custom Roles.

## Validation Rules

Everbridge runs a combination of validation rules while Creating a Custom Role.

### Permission Dependency (Checking)

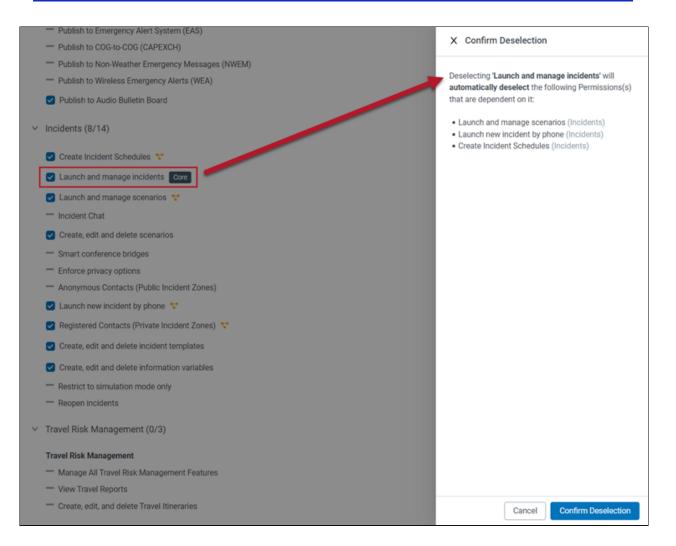

When checking a permission with dependencies, Everbridge validates if its dependent permissions are all enabled. If not, a slide-out panel with required permissions opens the user to confirm auto-selection.

Publish to Emergency Alert System (EAS)	X Confirm Selection
- Publish to COG-to-COG (CAPEXCH)	X Confirm Selection
<ul> <li>Publish to Non-Weather Emergency Messages (NWEM)</li> </ul>	
Publish to Wireless Emergency Alerts (WEA)	You are selecting Permission 'Launch new incident by phone'.
Publish to Audio Bulletin Board	
V Incidents (0/14)	Permission Dependency The following Permissions will be automatically
Create Incident Schedules 💙	selected upon confirmation:
Launch and manage incidents     Core	Launch new incident by phone     Select at least one of the following Permissions     Launch and manage incidents (Incidents)
Launch and manage scenarios 💙	Launch and manage incidents (incidents)
- Incident Chat	
Create, edit and delete scenarios	
- Smart conference bridges	
- Enforce privacy options	
Anonymous Contacts (Public Incident 7 res)	
Launch new incident by phone 😙	
Registered Contacts (Private Incident Zones) **	
Create, edit and delete incident templates	
Create, edit and delete information variables	
Restrict to simulation mode only	
- Reopen incidents	
<ul> <li>Travel Risk Management (0/3)</li> </ul>	
Travel Risk Management	
Manage All Travel Risk Management Features	
- View Travel Reports	
Create, edit, and delete Travel Itineraries	Cancel Confirm Selection

### Permission Dependency (Unchecking)

When unchecking a permission that has a dependency on it, the system validates if permissions dependent on it are all disabled. If not, a slide-out panel with impacted permissions appears for the user to confirm auto-deselection.

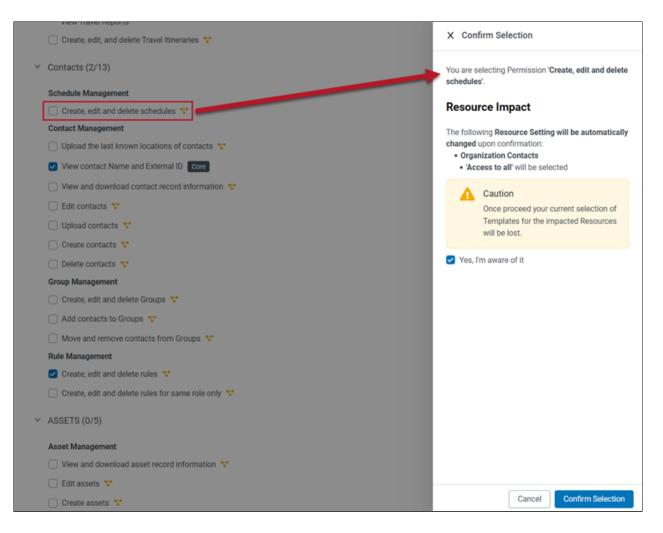

#### **Resource Impact**

When checking a permission with resource impact, we validate if the required resource is configured as expected. If not, a slide-out panel with the impacted resource iopens for the user to confirm the auto-change.

#### **Core Permission**

When unchecking one of the four Core Permissions, we validate if this is the only Core Permission (or permission combination) remaining on the role. If so, the user will be prevented from deselecting it and presented with a slide-out panel with Core Permissions information for troubleshooting.

	Publish to Audio Bulletin Board	X Core Permission
~	Incidents (7/14)	The following Permission(s) are fundamental feature
	Create Incident Schedules 🚏	Permissions for a role. Please ensure at least one of the core permission(s) is selected:

	Create, edit and delete schedules 🄝	

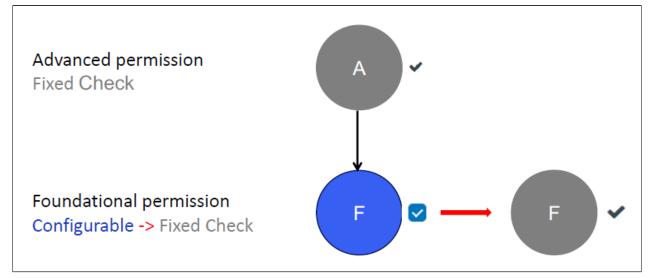

## **Custom Role Considerations**

### Interim Behavior - Configurable to Fixed Check

Advanced permissions that are enabled but not configurable and have a dependency on foundational permissions will prevent the foundational permissions from being configurable.

#### Example

The Create, edit, and delete Ingestions permission depends on Create, edit, and delete Incident templates. and Create, edit, and delete Ingestions is a fixed-check permission for the Incident Administrator role. Therefore, Create, edit, and delete Incident templates won't be configurable if the user starts from an Incident Administrator role template.

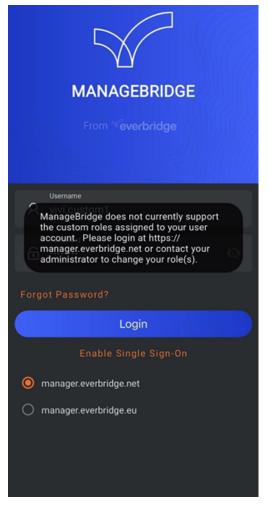

## **Known Exceptions**

The below feature sections may not work properly for Custom Roles until later iterations:

- Smart Orchestration
- Scheduling Manage Calendars, access Calendars in Notifications/Incidents Templates, and Notifications/Incidents launch workflows

#### ManageBridge

In addition to the above feature areas, ManageBridge is also currently unsupported by Custom Roles. If the user account you are logged into ManageBridge with has only Custom Roles, you will see the following error message without being able to proceed:

# **Custom Roles REST API**

### **REST API Response – Role APIs**

The following APIs support role-related functions within an Organization. Note that custom Roles support the GET method, but there's no **permissionScope** or **roleDataScope** field in the response. Custom roles do not support POST/PUT/ DELETE and will return an error message in response.

There should be no change to Legacy Roles' behavior. See the <u>Everbridge</u> <u>Developers Hub</u> for API documentation.

Endpoint	Function	Behavior	Response Example
GET /roles/ {OrganizationId}/ {roleId}	Get a role for an Organization.	Return JSON response without field premissionScope and roleDataScope if the role is a custom role.	<pre>{    "id":     2526269698736143,    "roleTemplate":         "CUSTOMIZED",    "name": "custom    role 1" }</pre>
POST /roles/ {OrganizationId}	Create a role for an Organization.	Error out if the role is custom.	<pre>{    "status": 400,    "message":    "Attribute    roleTemplate value    is CUSTOMIZED" }</pre>
PUT /roles/ {OrganizationId}/ {roleId}	Update a role for an Organization.	Error out if the role is custom.	<pre>{    "status": 400,    "message":    "Attribute    roleTemplate value    is CUSTOMIZED" }</pre>
DELETE /roles/ {OrganizationId}/ {roleId}	Delete a role from an Organization.	Error out if the role is custom.	<pre>{   "status": 400,   "message": "Role   5743578160562301 is an ACCOUNT_ADMIN,   Organization_ADMIN,   or Custom Role. It   cannot be   deleted." }</pre>

GET /roles/ {OrganizationId}	Retrieve all roles for an Organization.	Returns a JSON response without the premissionScope and roleDataScope fields for custom roles.	
---------------------------------	-----------------------------------------------	---------------------------------------------------------------------------------------------------------------------	--

### **REST API Response – User APIs**

The following APIs support the assigning and unassigning of a Custom Role for a user. See the <u>Everbridge Developers Hub</u> for API documentation.

Endpoint	Function	Behavior
GET /users	Retrieve all users for an account.	No permissionScope or roleDataScope fields in response for the Custom Role of the user.
GET /users/{userId}	Get a user for an account.	No permissionScope or roleDataScope fields in response for the Custom Role of the user.
POST /users	Create a user for an account.	Able to assign a custom role for a user
PUT /users/{userId}	Update a user for an account.	Able to assign/unassign a custom role for a user
DELETE /users/{userId}	Delete a user from an account.	No change to existing behavior.

**NOTE:** There are no **permissionScope** or **roleDataScope** fields for Custom Roles in the **GET /users** response.

## **Support Resources**

The following Custom Roles resources are available for download in the Support Center:

- <u>Custom Roles FAQ</u>
- Custom Roles Known Issues and Exceptions
