Introduction

Auto-Published Risk Intelligence uses Everbridge's proprietary AI models and decades of expertise to deliver rapid, high-volume Risk Event Alerts. It complements analyst-validated intelligence, giving customers broader coverage and faster notifications of critical events.

Auto-Published Risk Intelligence

Auto-Published Risk Intelligence uses artificial intelligence to automatically generate Risk Events, including fields like Severity, Category, Subcategory, Title, Location, and Summary. These Risk Events are produced faster and in greater volume than traditional analyst-curated Alerts.

Where to Find Auto-Published Risk Events

Auto-Published Risk Events appear in the **Everbridge Risk Events** and **Everbridge Travel Risk Events** feeds. These Events will display as **Published By: Artificial Intelligence** in the **Risk Event Details**.

S 58th St & W Airways Ave - There are reports of a one-alarm industrial fire in the area.

Reported to VCC - 13h ago Tue, Sep 2, 2025 at 9:04 PM	Location Franklin, WI, United States
Event Start - 13h ago Tue, Sep 2, 2025 at 9:04 PM	Summary Sources are reporting a one-alarm industrial fire near S 58th St and W Airways Ave. There were no immediate reports of injuries. Expect localized disruptions as emergency services operate.
Severity Minor	Original Text: Franklin, WI (Milwaukee County) 1 Alarm Fire 9600 S 58th St E112 o/s fire alarm activation at Kronos, reporting fire in the roof. Req full assignment 23:00
Category HAZMAT/Fire	Information Source Police/Fire Scanner
Subcategory Structure Fire	
Source Everbridge Risk Events	
Published By Artificial Intelligence	

Users can also filter the Risk Events on the Visual Command Center **Map** by selecting the relevant field under **Published By**.

Enabling Auto-Published Risk Intelligence

In order to see Auto-Published Risk Intelligence, it must first be enabled at the Organization level by an Organization Administrator.

NOTE: An Organization must be specifically enabled for the toggle to appear. For Everbridge 360 Enterprise customers, this is included by default. If the feature isn't enabled, the toggle will not be visible. Customers interested in enabling this for their account should contact their Account Managers for more information.

To enable Everbridge Auto-Published Risk Intelligence:

1. From the Organization level, navigate **Settings > Everbridge Open > Everbridge Risk Events** and/or **Everbridge Travel Risk Events**.
2. Click the **Artificial Intelligence** toggle to turn it on.

The screenshot shows the Everbridge user interface at the Organization level. The top navigation bar includes 'Organization', 'Member Portal', 'Everbridge Open' (which is underlined), and 'Everbridge Mobile App'. On the left sidebar, 'Risk Events' is selected and highlighted with a red box. The main content area is titled 'Risk Events: Everbridge Risk Events' and features a section for 'ARTIFICIAL INTELLIGENCE'. This section contains a paragraph explaining that enabling this feature will include events published by automation. Below the text is a blue toggle switch labeled 'On', which is also highlighted with a red box. The left sidebar lists other options: Self-Service Risk Events, Dataminr, Earthquakes (USGS), Everbridge Advisories, Everbridge CA Evacuation Zones, Everbridge Global Highlights, Everbridge Nixle, Everbridge Risk Events (highlighted), and Everbridge Situation Reports.

NOTE: Once Artificial Intelligence is enabled for a feed, it will trigger Workflows and generate Alerts for all Risk Events in that feed, including Auto-Published Events. CEM Orchestration users can configure their Workflows to handle Auto-Published Events differently. For details, see [Using Auto-Published Risk Events in CEM Workflows](#).

Auto-Published Content Generation

Everbridge's proprietary Risk Intelligence models are built from 20+ years of data and experience from the **Risk Intelligence Monitoring Center (RIMC)** analyst team. By analyzing data from multiple sources, the models categorize, geolocate, and summarize it, converting raw information into actionable Risk Events.

Integrating Auto-Published Content with Analyst-Curated Intelligence

Auto-Published Risk Events are integrated with human-curated intelligence from the RIMC team. Both types of Risk Events are delivered through the same feeds, offering:

- **Speed & Volume** - AI-generated Risk Events provide rapid delivery and a higher volume of Alerts.
- **Quality & Validation** - RIMC analysts validate, update, or resolve conflicting information for Risk Events that meet reportability criteria or escalate in Severity.

Analyst Validation

Analyst validation occurs when:

- The event meets RIMC's reportability criteria (e.g., shootings, major fires).
- The event escalates in scope or impact, requiring manual reassessment.

When an analyst validates or updates an Auto-Published event, it will display as **Published By: Everbridge Analyst** in the **Risk Event Details**.

Routine events (such as minor traffic accidents, residential fires, etc.) may remain unvalidated if they fall outside of RIMC's criteria and have no significant updates. Many Risk Events will also start with an Everbridge Analyst instead of an AI-generated event.

Below is an example of a Risk Event that started off as Auto-Published, and then was later validated and updated by an Everbridge Analyst:

W Diamond Lake Rd & Harriet Ave - There are reports of a possible shooting at Annunciation Church; multiple injuries indicated.

Reported to VCC - 7d ago
Wed, Aug 27, 2025 at 6:46 AM

Location
Minneapolis, MN, United States

Event Start - 7d ago
Wed, Aug 27, 2025 at 6:40 AM

Summary
Sources are reporting a possible shooting at Annunciation Church near W Diamond Lake Rd and Harriet Ave. Multiple injuries were indicated but not specified. Expect associated disruptions as police investigate.

Using Auto-Published Risk Events in CEM Workflows

Users can configure CEM Orchestration Workflows to include a Filter with the Publication Method Condition, which allows selection of Auto-Published (Artificial Intelligence) Risk Events, Everbridge Analyst-published Events, or both. For more on CEM Orchestration Workflows, see the [CEM Orchestration Guide](#).

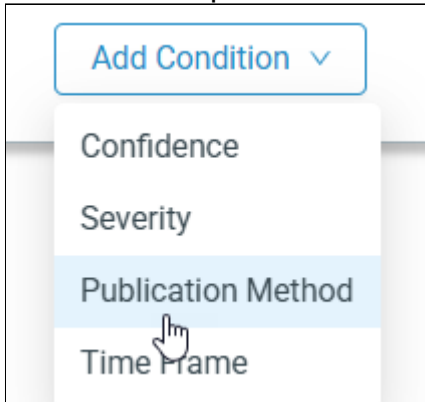

NOTE: If a Workflow is configured to trigger only on Everbridge Analyst-published Events, and a Risk Event is initially published by Artificial Intelligence, the Workflow will still trigger if and when the Event is later updated by an Everbridge Analyst.

To add this Condition:

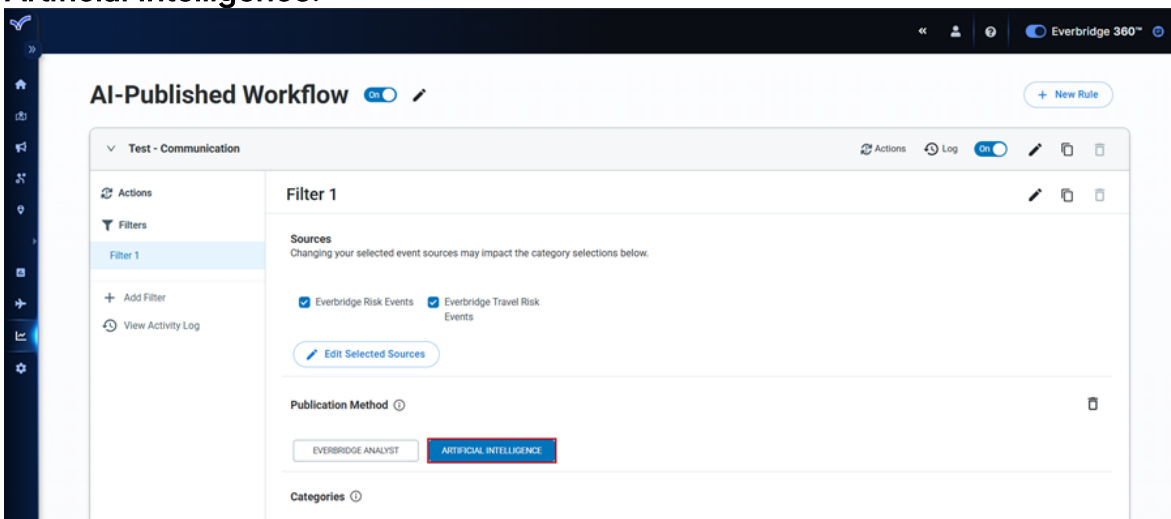

1. When editing a Workflow or creating a new one, under **Sources**, select **Everbridge Risk Events** and/or **Everbridge Travel Risk Events**. Note that this feature is only supported for these two Sources, and including additional Sources will prevent the Publication Method Condition from being added.

2. Scroll to the bottom of the page and select **Publication Method** from the **Add Condition** dropdown menu.

3. Scroll back up to the newly-added **Publication Method** section and select **Artificial Intelligence**.

4. Continue creating the Workflow as needed, then click **Save**.

NOTE: Similar to other Workflow Conditions, if you do not set a Filter for Publication Method, the system will not automatically apply it. In that case, all Publication Methods methods will be matched.
